

SAHIL SINGH

sahilsinghjadaun4@gmail.com | +91-8218534932 | [LinkedIn](#) | [GitHub](#) | [LeetCode](#)

SKILLS

Languages: HTML, CSS, JavaScript, TypeScript, React, Python, MySQL, Java
AI / ML: LangGraph, LangChain, Groq API, Google Gemini API, FastAPI, AI Agent Workflows, Prompt Engineering
Data Analysis: Excel, Power BI, Pandas, Matplotlib, NumPy, Exploratory Data Analysis (EDA)
Databases: PostgreSQL, MySQL, MongoDB, SQLite, SQLAlchemy (async ORM)
Frameworks & Libraries: React.js, Node.js, Express.js, Scikit-learn, Tailwind CSS, Redux Toolkit, Axios, Vite
Concepts: Data Structures & Algorithms (DSA), REST API, Full-Stack Development, Quality Management Systems (QMS)
Tools: GitHub, VS Code, Jupyter Notebook, Google Colab, PowerPoint, Google AI Studio, Google Cloud Run

PROJECTS

Pharma QMS — AI-Powered Customer Complaint Management System [GitHub](#)

React · Redux Toolkit · Python FastAPI · LangGraph · Groq(llama-3.3-70b-versatile) · PostgreSQL · SQLAlchemy · Tailwind CSS

- Built a full-stack pharmaceutical Quality Management System (QMS) with a 6-node LangGraph AI pipeline that automatically extracts, classifies, and processes customer complaints from uploaded PDF, DOCX, TXT, and EML files — replacing manual data entry entirely.
- Engineered an AI Intake Assistant that auto-populates all 13 complaint form fields (product name, batch number, manufacturing/expiry dates, severity, priority, and more) from raw documents using Groq's(llama-3.3-70b-versatile) model with structured JSON extraction.
- Implemented 5 bonus AI features in a single pipeline run: Completeness Checker (scores missing fields %), AI Risk Classification (Low / Medium / High / Critical), Root Cause Analysis, CAPA Recommendation, and a 2-sentence Executive Summary for QA reviewers.
- Built an AI Chat Copilot panel that accepts natural language commands ('Change priority to Urgent') and updates live form fields in real time via Redux state — no manual editing required.
- Designed async FastAPI backend with SQLAlchemy async ORM connected to PostgreSQL, exposing 6 RESTful endpoints; Vite proxy ensures zero-config frontend-to-backend communication during development.

DeadlineZero — AI-Powered Productivity Companion [GitHub](#) [Live Demo](#)

Vibe2Ship Hackathon 2026 — India's Biggest AI Coding Hackathon | Coding Ninjas × Google for Developers

- Built a full-stack AI productivity companion using React 19, TypeScript, Node.js, Express.js, and Tailwind CSS, enabling users to plan, prioritize, and complete tasks before deadlines are missed.
- Integrated Google Gemini 2.0 Flash via the @google/genai SDK to power Zara — an AI coach that receives the user's live task list as real-time context and delivers personalized, actionable scheduling advice.
- Engineered an intelligent urgency scoring algorithm (deadline proximity × priority weight) that auto-sorts tasks in real time, always surfacing the most critical work at the top of the dashboard.
- Built a Danger Zone alert panel with pulsing UI for tasks due within 24 hours, live countdown labels, and context-aware toast notifications triggered when a deadline falls under 2 hours.
- Implemented Focus Mode, daily streak tracker, progress dashboard, category filters, Recharts-powered charts, and one-click CSV export for complete task lifecycle management.
- Deployed on Google Cloud Run via Google AI Studio with a secure server-side Gemini API proxy ensuring the API key is never exposed to the client.

EDUCATION

- | | |
|--|--------------------------|
| ● B.Tech, Computer Engineering (AI/ML) — Vision Institute of Technology, Aligarh | September 2024 – Present |
| ● XII (CBSE) — Krishna International School, Aligarh | 2024 |

CERTIFICATIONS

- Vibe2Ship – India's Biggest AI Coding Hackathon | Coding Ninjas × Google for Developers — Participant (July 2026)
- Brain Teaser Quiz Competition — Vision Institute of Technology (February 2026)
